

EMS Receives a Federal Firearms License

EMS, Inc a leading provider of 3D scanning and 3D Printing products and services has received a Federal Firearms License (FFL) from the ATF. A FFL allows EMS to accept shipments of firearms directly to their office for 3D scanning, engineering, prototyping and other services.

The use of 3D digital technology in the world of firearms has become increasing popular. Applications include add-on accessories, holsters, laser sites, custom grips, and much more. EMS uses some of the best 3D scanners on the market with an accuracy and resolution of less the 20 microns (0.00078”). This is extremely important for high precision firearms where accuracy is critical.

According to Mark Kemper, President of EMS, Inc “We have been 3D scanning firearms for years but have had to work through a third party FFL. Having our own FFL speeds up the process so we can work directly with our customers.”

EMS is also ITAR certified which allows it to work with companies involved in the design, engineering and manufacturing of weapons and other related systems used by the US government and military forces.

About EMS

Since 2001 EMS has grown to become one of the premier providers of 3D scanning, 3D printing and product development services and products. For over 12 years EMS has helped thousands of clients across a variety of industries build and manage their ideas and bring them to life. EMS is based in Tampa, FL and has offices in Atlanta, GA and Auburn Hills, MI.
