

EMS Expands into their new Headquarters

Tampa, Florida – Monday, February 28, 2011 – EMS, Inc.

EMS Inc., the premier provider of rapid product development equipment and services including Z Corp 3D Printers and 3D Scanners, announced that they have outgrown their former headquarters and has moved into a new larger, more modern location. Recently, EMS has been revealing a lot of news in relation to the positive growth that they have developed and this is another significant reflection of their forward progression. The larger space and well-designed layout is necessary to accommodate the staff and business growth that they are facing.

“Our new corporate headquarters office will enable us to better respond to the needs of our customers and will support expansion in all of our functional operations. This move is pivotal for our forecasted growth. Rapid prototyping, Product Design and 3D Scanning departments will each have their own designated lab space to allow for efficient and effective deliverables. We are always conscious of our customers and want to ensure them the best service and quality that they deserve. Plus, it is thanks to them for our continued growth and expansion”, commented President & CEO Mark Kemper.

The new office location is easy to get to and seconds from one of Tampa’s main traveling arteries I-4. Easily located off of US-301, makes it also convenient for customers that utilize I-75. The new address for EMS’s Headquarters is:

**5803 Breckenridge Pkwy, Ste D
Tampa, FL 33610**

EMS is also pleased to announce that they are going to hold an ‘Open House’ event at the end of the month on Wednesday, March 30th to show the new office and offer demos on all their products and services. The event will be similar to their past 3D Technology Days, where attendees can come anytime and see what they are interested in.

There were be no boring slideshow presentations or aggressive sales pitches, just engineers demonstrating the latest rapid prototyping, reverse engineering and 3D CAD technology. Products to be demonstrated include Z Corp 3D printers and hand-held 3D Scanners as well as 3D Scanners from Konica-Minolta, Surphaser and software from SpaceClaim and RapidForm.
